Sarah

This passage is about a scientist who spent his life ~~time~~ ^{the} on study of active volcanoes. There are thousands of volcanoes in the world and most of them are dead. However, a big eruption brings huge force and it causes disasters to people and their surroundings. Moreover, the hot melted rocks push through the crack and burst, which can cause huge pollution and health hazard to people around ~~a~~ pretty large areas and this even affects air traffic.

Now scientists have made many observations and detail ^{ed} studies about volcanoes. By successfully applying sophisticated instruments to get early warning, scientists feel more confident ^{to} to predict an eruption. Nevertheless, some volcanoes ~~are~~ still erupted ~~ed~~ with little warning because of the limitation of ~~(the)~~ present knowledge about active volcanoes. To give notice of unaware dangerous, scientists sometimes have to risk their lives to get first-hand information. They are heroes ^{because they} ~~(to)~~ save others by informing ^{the} public about early evacuation.
