This passage described the strike of the ^(by) busmen of the public bus. Because ^{drivers} the agreement between the union and the bus company was not reached, this strike was expected to last longer. In order to solve the transportation problems, many people, including private car owners, ^{d to} were offer help for people to get to work by sharing their cars. In addition, a number of students drove the buses temporary. ^{irily} People were happy for the student's services ^{B, 1} despite there ^{even though} are a ^{few} little complains ^{about} of their driving too fast. ^{"here"}

The word strike is originated from ancient Greece. As a way to settle disputes, there were frequent wars at that time. The wives of soldiers of both sides were very upset because their husbands were always in fighting. They refused to let them enter ^{the bed} into room. This proved very effective, and the war ended very quickly. This event probably was the first strike. Today, many workers join unions in most countries, from time to time, they demand for better payment and working conditions. Most strikes end in one or two weeks, but some last longer because the agreements cannot be reached between unions and company owners. General speaking, strikes help build a fair labor relationship, but they also increase the cost of goods, thus reducing competitiveness of products in the markets.
