~~pearl~~ pearl

Even today, ^a **mine** is still a dangerous place by modern standards. The facts ^{are} that miners risk their **lives** to dig deep into earth to get useful minerals, such as coal, metals, diamonds or gold etc. Despite some mines ^{having} ~~have~~ good safety measures and modern facilities, ^{miners} ~~it~~ still run the risk of being trapped because these activities like cave exploration, ~~there are~~ too many ^{dangers} **unforeseeable** dangerous awaiting workers. ^{involve}

I think even if the mining industry has good profit, ^{be} ~~it~~ still needs to ^{be} ~~banned~~ because the human life is ^{invaluable} ~~valueless~~, those dead in accident ^{can} not ^{return} ~~back~~ to life. **Moreover** mining destroys our environment as it brings pollutions to our water and air. Further, the possible **rescue** efforts cost a lot ^{resources} ~~resources~~. For example, rescue teams must be **mobilized** and take immediate actions and at ^{the} same time a lot equipment such ^{as} a large machines, pumps, extra power which actually cost too much compared with ~~mine~~ ^{minerals being} sold.

People may argue that our industries will fail if we do not have these minerals and coal as raw materials for various industries and power supplying. As a **temporary** solution, I think, more robots can put into use in those risky spots, and measures should be take ^{to} reduce environment impact as well to ensure sustainable growth of our ^{planet} ~~plant~~.
